VENTERRA IS TO ACQUIRE CAPE HOLLAND

We are thrilled to announce that CAPE Holland will be acquired by the Venterra Group, a leading offshore wind energy services company dedicated to driving the world's energy transition through wind power. [You can find the press release here.](#)

This strategic move marks a significant milestone in our journey to realise our ambitious growth plans. This acquisition is a crucial stepping stone, elevating our organisation to the next level and enabling us to better serve the market alongside Venterra's member companies. With the wind industry's rapid growth, partnering with a company of scale is pivotal to fulfilling our critical role in the energy transition.

Laurens de Neef, Chief Executive Officer of CAPE Holland, said; 'We are proud of the innovation that has driven our growth in offshore wind. Joining Venterra will enable continued investment in foundation installation in deeper waters and the ability to support larger turbines up to 18-20 MW. We share Venterra's vision to create a sustainable supply chain and help the industry to innovate at the pace needed to meet the needs of developers and offshore contractors. Venterra's footprint in the United States and APAC as well as Europe fits our own expansion plans as we deploy expertise gained from European, Taiwanese and Japanese wind farms across the global market.'

Although the ownership has changed, the identity of CAPE Holland will remain. You can expect the same level of excellence and dedication in providing you with the best possible solutions.

We wish to thank CAPE Investment Partners for their support throughout our journey up to this point. Moving forward, we eagerly anticipate the next stage of our journey with Venterra, as we continue to strive for excellence and innovation in the renewable energy sector.

Together with Venterra, we will be better equipped to play a significant role in driving the global energy transition towards a sustainable future.
